

I2K 2024 Conference - From Images to Knowledge

Wednesday, October 23, 2024

† Poster Session #1 (2:00 PM - 4:30 PM)

[id] title	presenter	board
[62] Automated Tracking and Analysis of Plasma Membrane Dynamics in TIRF-SIM	HARMANEC, Adam	01
[63] Morphodynamics of human brain organoid development	JAIN, Akanksha	02
[64] Exploring gene function and morphology using JUMP Cell Painting Consortium data	MUÑOZ GONZÁLEZ, Alán Fernando	03
[65] Phenomic data exploration guides drug discovery in a human disease network	GUEMBE MÜLBERGER, Alba	04
[66] BrainGlobe: Accessible software for neuroanatomy of emerging model organisms	FELDER, Alessandro	05
[67] A Bayesian solution to count the number of molecules within a diffraction limited spot	HILLSLEY, Alexander	06
[68] Quantifying intra-tumoral molecular subtype heterogeneity in MIBC from histological slides using a deep learning approach	BLONDEL, Alice	07
[69] Shaping progress in biomedical image processing with project-based learning	KIST, Andreas	08
[70] Diffusion Models in Microscopy: Bleedthrough Removal, Image Splitting, and Dehazing	RAY, Anirban	09
[71] A contour-based alignment tool enabling to merge data from live acquisition & immunofluorescence	MACE, Anne-Sophie	10
[72] Computational modeling of nanoscale synapse morphology and organization using correlative super-resolution microscopy	SALOMON, Antoine J.-F.	11
[73] An Image Analysis Pipeline for Quantifying the Spatial Distribution of Fluorescently Labeled Cell Markers in Stroma-Rich Tumors	RUZETTE, Antoine	12
[74] A Comprehensive Image Analysis Pipeline for Investigating Autism Spectrum Disorder-like Behaviours in <i>Drosophila melanogaster</i>	RAVERA, Arianna	13
[75] A Cloud-Native Virtual Bioimage Analysis Research Desktop (BARD) for Deployment of Containerised Bioimage Tools on Kubernetes	KHAN, Arif	14
[76] fsdb - an open-source bioimage analysis and (meta) data management framework	JENETT, Arnim	15
[77] Example of a FBIAS project: multiple fish tracking	MESLIN, Arthur	16
[166] MicroSplit: Semantic Unmixing of Fluorescent Microscopy Data	ASHESH, Ashesh	17
[78] Nellie: Automated organelle segmentation, tracking, and hierarchical feature extraction in 2D/3D live-cell microscopy	LEFEBVRE, Austin E. Y. T.	18
[79] FAIR Image Analysis Workflows	SERRANO-SOLANO, Beatriz	19
[80] High-throughput microscopy for deciphering the genetics of cell cycle diversity in wild yeasts	MAIRHÖRMANN, Benedikt	20
[114] Unsupervised Model Selection Through Test Time Perturbation Consistency	TALKS, Joshua	21

[82] nlScript: A framework for creating natural-language-based user interfaces	SCHMID, Benjamin PALMISANO, Ralph	22
[83] Bilayers - an easy way to make your favorite deep learning tool more user-friendly	CIMINI, Beth	23
[84] Using deep learning on single-cell images to unlock novel disease signatures and candidate therapeutics	MIGLIORI, Bianca	24
[85] Detecting immunological synapses in patient samples through analysis of Imaging Flow Cytometry data	VAN DEN BROEK, Bram	25
[86] Quantification of microtubule-guided peroxisome migration using a hidden Markov chain model	SVENSSON, Carl-Magnus	26
[87] BioImage.IO Chatbot: A Community-Driven AI Assistant for Integrative Computational Bioimaging	FUSTER BARCELÓ, Caterina	27
[88] Using Nextflow for scalable and reproducible batch image analysis	TISCHER, Christian	28
[89] Semi-automatic tracing and analysis of neurons in Brainbow images	CAPORAL, Clément	29
[174] Fiji Progress and Priorities 2024	RUEDEN, Curtis	30
[91] Pollen to pixels: perception of heat stress by machine learning to predict fertility	VAN DEN BRINK, Daan	31
[92] High-throughput in-vivo single-molecule imaging of DNA repair in E. coli	THEDIE, Daniel	32
[93] Enhancing Image Resolution Through Averaged Autocorrelation Inversion	ANCORA, Daniele	33
[94] Run-length based mathematical morphology for efficient processing of large 3D images	LEGLAND, David	34
[95] Segmentation of budding yeast organelles from bright field time-lapses	ADJAVON, Diane	35
[96] Discovering explanatory factors of spatial localization with point process models	STURM, Dominik	36
[97] Automated mapping of 3D smFISH gene expression data to electron microscopy	BUGLAKOVA, Elena	37
[98] Machine learning based Evaluation and Enhancement (EVEN) for optical microscopy	CORBETTA, Elena	38
[99] Untangling spaghetti: using BigTrace plugin to analyze 3D filaments in time and space	KATRUKHA, Eugene A.	41
[100] pymmcore-plus: a pure python way to control your microscope with Micro-Manager	GASPAROLI, Federico	42
[101] Beyond spot detection with spotMAX	PADOVANI, Francesco	43
[102] Deep learning-based classification for label-free microscopy	SCHÖB, Franziska	44
[103] User-oriented tools to characterize epithelia dynamics	LETORT, Gaëlle	45
[104] Light-Insight: Spatiotemporal profiling of human early brain organoid development.	GUT, Gilles	46
[105] Investigating the structural complexities of DNA using high resolution atomic force microscopy	READ, Harriet	47
[106] Automating the Neuronal Differentiation of Ntera-2 Cells	MCCOURTY, Heather	48
[107] Deep learning enables cross-modality super-resolution for volumetric reconstruction	PARK, Hyoungjun	49
[108] Interpreting Microscopy Images with Machine Learning	MARTINS CUNHA, Inês	50

[109] Cell lineage reconstruction and comparison from light-sheet microscopy image datasets	LIASKAS, Ioannis	51
[110] pyCyto: A Pythonic Cytotoxicity Analysis Pipeline	KA LONG KO, Jacky	52
[115] Mars, a molecule archive suite for analysis of single molecule properties from bioimages	DUDERSTADT, Karl	53
[112] From pixels to insights: Learning morphological descriptors from cellular ultrastructure	HELLGOTH, Jonas	54
[169] napari-signal-classifier: Leveraging Interactive Temporal Features Annotation to Classify Signals and Events	LEOMIL ZOCCOLER, Marcelo	55
[191] conv-paint: an easy to train interactive pixel classifier for napari	HINDERLING, Lucien	56
[121] TopoStats: taking AFM analysis to new heights	WIGGINS, Laura	57
[193] Pre-Processing Quality Control and Image Exploration for Bioimage Analysis: A Novel Python Application	KARMAKAR, Ranit	58
